DS F3VER

12/10/2026

The F3VER ("Fever") previews the next DS 3, due in 2028 on the new STLA architecture, and swaps the crossover for a low five-door hatchback: 4,190 mm long, 1,840 wide, 1,460 high with a 2,700 mm wheelbase, 140 mm more than today's DS 3. A 400-litre boot; DS promises "class-leading" electric range without giving figures.

The body is a catalogue of active surfaces: dichroic **Cosmic Blue** paint shifting from blue to violet, a customisable champagne-gold roof ring, a front column with the illuminated DS emblem and Y-shaped daytime running lights. At the rear, **16 LED panels in a magnesium frame** and a programmable digital screen built into the bumper, with flush rear door handles.

The interior stayed hidden behind dark-blue tinted glass: DS will show it later. As a study piece for exterior decoration it is among the most interesting of the year: effect colour, exposed metal, light and screen sharing the same rear volume.
