Mazda Vision X-Coupé

29/10/2025

Shown at the 2025 Japan Mobility Show, the Vision X-Coupé (the X is pronounced "cross") is a four-door grand tourer 5.05 m long, nearly 2 m wide, 1,480 mm tall with a 3,080 mm wheelbase. It brings back the **rotary engine** as a range extender in a 375 kW plug-in hybrid with two electric motors and all-wheel drive: around 160 km electric and close to 800 km in total.

The body takes the Kodo language to its most fluid form, with an **illuminated grille**, cab-rearward stance and rear lights integrated into the rear volume. Inside: four seats, digital mirrors, three analogue dials above a thin-rimmed wheel, a side-mounted touchscreen, green fabrics and warm wood, and a stitched gear selector with P-R-N-D positions and a manual mode.

Mazda also presents it as a testbed for mobile carbon capture: designed for carbon-neutral fuels derived from microalgae, it captures CO_2 from the exhaust to reuse in crops or high-performance carbon materials.
