Additives on a micro scale

26/01/2010

These micro-additives (with a size close to a thousandth of a millimetre) allow reducing the weight of the pieces while keeping all the benefits. The aim is to reduce the final weight of the vehicle and its consequences, such as the fuel consumption and the emission of CO2 to the atmosphere. If you would like to receive more information about this, you can request it by going to the [url=https://www.maierinnovation.com/consul_ini.php?id_req=7#?subject=Profile%20Update%20Request][b] finishing [/b][/url] section of this site.
